DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 3/05, 5/05, 3/07 and 5/07 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suwa et al [2003/0165764] in combination with Suwa et al [2003/018930] and Menzel et al [5870661]. Applicants' claims 1-8 are to a toner containing a cycloolefin copolymer resin as a binder. Claims 9-16 are to an image forming method of fusing a toner with a cycloolefin copolymer. Both Suwa et al teach the binder resin and the use of a fixing roller in the image forming method. The fixing roller is not teaching the use of a polybenzimidazole as a coating of a surface in the heat fixing of an image. Menzel et al teaches the heat fixing in an electrostatic image forming process. Any suitable

thermally-stable material having a low thermal conductivity such as polybenzimidazole (PBI) can be used as a surface coating note Col.5 and Col.6. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the thermal stability of the (PBI) as the surface coating of the fixing rollers in the thermal fixing of the image produced by the toners of Suwa et al to prevent offset and degloss in the formed image.
